SCPI Commands ZSAC vs. ACL

Höcherl & Hackl GmbH - Industriestr. 13 - 94357 Konzell - Germany

Rev. 2

For identical commands/queries, the following notes must be considered:

- The setting values after resetting the system may differ.
- The actual, numeric settings when passing parameters MIN or MAX may differ.
- The format of transferred parameters can differ.
- The format of returned values and strings may differ.
- The assignment of status registers can differ.
- The control behavior with regard to speed and accuracy may differ.
- The scope of commands can differ.

Use the user manuals to analyze the detailed differences between the ZSAC and ACL series commands/queries.
