Technical data of production series A, rev. 2. Subject to technical changes without notice.

The specified accuracies refer to an ambient temperature of 23 ±5 °C. The specified accuracies are valid when the sense lines are connected and when the unit is connected to undisturbed voltages (ripple and noise < 0.1 %). At voltages with higher disturbance values the accuracy can change for the worse.

- The applicable time or frequency range is limited by the rise/fall time of the respective model. positive/negative DC voltage or RMS value of a sinusoidal AC voltage only 0 ... 10 V
